

An End-To-End IIoT Business Solution

PredictorMT is an innovative platform revolutionizing predictive maintenance by integrating IoT sensors, historical data, and external factors to deliver real-time asset health insights.

• SOLUTIONS

Our Intelligent Solutions

Advanced AI-powered technologies that help monitor assets, predict failures, and optimize industrial performance.

Predictive Maintenance Engine

Predict equipment failures before they happen using AI-driven analytics. Monitor asset health in real time, reduce unexpected downtime, optimize maintenance schedules, and improve overall equipment reliability.

IoT Sensor Technology

Connect intelligent IoT sensors to continuously monitor machine performance. Collect real-time operational data, enable cloud connectivity, and gain instant insights for faster maintenance decisions.

Historical & External Data

Integrate historical machine records with external operational data. Analyze trends, detect anomalies, improve prediction accuracy, and support smarter maintenance planning with AI insights.

End-to-End Workflow

Streamline the complete maintenance process from data collection to AI analysis and automated recommendations. Improve visibility, reduce manual effort, and ensure efficient asset management.

Dashboard & Analytics

Visualize machine health through interactive dashboards and reports. Monitor energy usage, operating conditions, performance trends, and receive actionable insights for predictive maintenance.

Parameter Tracking

Continuously track critical equipment parameters with smart sensors. Detect performance deviations, generate automatic work orders, and maintain optimal operating conditions across all assets.

• Our Core Values

Driving Industrial Innovation Through AI & Reliability

AI-Driven Innovation

We leverage artificial intelligence and

Reliability & Performance

Our platform continuously monitors

Smart Connected Solutions

Combining IoT sensors, cloud computing,

predictive analytics to transform industrial maintenance with smarter decisions, greater efficiency, and optimized equipment performance.

equipment health, minimizes unexpected downtime, improves reliability, and maximizes productivity across industrial operations.

and advanced analytics to deliver real-time monitoring, predictive insights, and sustainable industrial growth.
